

Garbolino

Super G10

A DECIDEDLY MORE REFINED POLE IN A CLASS OF ITS OWN.

If you're in the market for an upper class pole, the new Garbolino Super G10 must surely be the 'crème de la crème'. Built from the finest ultra high modulus low resin carbon we've ever used, the Garbolino Super G10 offers exceptional performance for all styles of match fishing. As you would expect from a pole of this calibre, it is unbelievably light and rigid - even at 16 metres, making rig control simply...simple! Joints are reinforced both internally and externally on all critical stress points throughout its length. This is an ideal all-round pole for fishing with power kits up to size 20 or standard kits to size 12. The short number 4 sections offer even more rigidity when fishing shallow, long or in strong wind, as well as giving extra strength and security when playing big fish to the net. But the spec doesn't stop there - its new 'ready to bush' number 1 section fits a number 6 elastic without cutting back. And our new, even smoother 'slip n slide' finish speeds up shipping - ultimately putting more fish in the net! The new Garbolino Super G10 - so refined one will be sipping Earl Grey tea from ones' thermos!
